Methods and Protocols, distinguished international researchers describe in detail their state-of-the-art methods for the microscopic imaging of cells and molecules. The authors cover a wide spectrum of complementary techniques, including such methods as fluorescence microscopy, electron microscopy, atomic force microscopy, and laser scanning cytometry. Additional protocols on confocal scanning laser microscopy, quantitative computer-assisted image analysis, laser-capture microdissection, microarray image scanning, near-field scanning optical microscopy, and reflection contrast microscopy round out this eclectic collection of cutting-edge imaging techniques now available. The authors also discuss preparative methods for particles and cells by transmission electron microscopy. The protocols follow the successful Methods in Molecular Biology

Surveys the selection, design, and operation of most of the industrially important separation processes. Discusses the underlying principles on which the processes are based, and provides illustrative examples of the use of the processes in a modern context. Features thorough treatment of newer separation processes based on membranes, adsorption, chromatography, ion exchange, and chemical complexation. Includes a review of historically important separation processes such as distillation, absorption, extraction,

transmission; and reception, computers, and non-sinusoidal signal amplification. The book starts by giving a general overview of a complete electronic system, electricity and circuits, capacitance, and inductance. The text also discusses alternating currents (a.c.), including the frequency and phase of a.c.; the capacitance and inductance in a.c. circuits; and the capacitance and inductance in a series. Diodes, triode, transistor equivalent circuits, and a suitable working point are also considered. The book describes oscillation, transmission lines, radiation and antennas, and audio-frequency amplification. The super heterodyne principle, radio- and intermediate-frequency amplification, electronic waveform generators, and switches are also encompassed. The text will be useful to electronics engineers, electricians, and computer engineers.

First published in 2005. Routledge is an imprint of Taylor & Francis, an informa company.

New Testament scholar Gerd Lüdemann continues his exploration of the life and teachings of Paul in this groundbreaking monograph, which synthesizes the research of his four previous books on Christianity's leading apostle. As the subtitle of the present work makes clear, Lüdemann comes to the conclusion that Paul should be considered not only Christianity's most influential proselytizer but in truth deserves the title of founder of the religion that ostensibly originated with Jesus of Nazareth. Though other scholars have previously made the point that Paul's interpretation of the Christian message actually obscured the original teachings of Jesus, Lüdemann goes further. His painstaking historical research shows that Paul created the major tenets of

the Christianity we know today and that his theology - an original synthesis of Hebrew and Greek belief systems - differs significantly from what we now know the historical Jesus to have preached. Based on a life-changing vision of the risen Christ, Paul naturally made his belief in the resurrection of the crucified Jesus the centerpiece of his interpretation of this new religion. But Lüdemann contends that however sincerely motivated he was, in the final analysis we must judge Paul's belief as self-deception. Paul never knew Jesus and he had only a passing acquaintance and an often-strained relationship with Jesus' apostles. As a result, he was not in a position to accurately represent Jesus' teachings. Through the accidents of history and his dynamic personality, his evangelizing efforts to the non-Jewish population of the Roman Empire succeeded, whereas the mission of other leading apostles (for example, Peter

and James) to a mainly Jewish audience failed. Thus, Paul's version of Christianity, not Jesus', captured the public imagination and eventually became the dominant religion of the West. In another book, L ü demann has called this historical accident The Great Deception. Here he shows that the deception began as self-deception within the deeply conflicted personality of Paul of Tarsus, the former Pharisee and zealous persecutor of the fledgling Christian sect whose dramatic conversion on the road to Damascus transformed him into its greatest promoter. This brilliant exegesis, based on twenty-five years of research, by a leading New Testament scholar with an unwavering commitment to historical accuracy presents a message rarely heard from any pulpit but one that churches can no longer honestly ignore. Gerd L ü demann is a professor of the history and literature of early

Christianity at the University of Göttingen, Germany. Professor Lüdemann's published conclusions about Christianity aroused great controversy in his native Germany, where the Confederation of Protestant Churches in Lower Saxony demanded his immediate dismissal from the theological faculty of his university. Despite this threat to his academic freedom, he has retained his post at the university, although the chair he holds was renamed to disassociate him from the training program of German pastors. Lüdemann is also the author of *Jesus After 2000 Years*, *Paul: The Founder of Christianity*, and *The Resurrection of Christ: A Historical Inquiry*.

specifically for the Intel/Windows/DOS platform, this complete and fully updated study of assembly language teaches students to write and debug programs at the machine level. Based on the Intel processor family, the text simplifies and demystifies concepts that students need to grasp before they can go on to more advanced computer architecture and operating systems courses. Students put theory into practice through writing software at the machine level, creating a memorable experience that gives them the confidence to work in any OS/machine-oriented environment. Proficiency in one other programming language, preferably Java, C, or C++, is recommended.
