Igneous rock is divided into two major groups: intrusive rock that solidifies from underground magma, and extrusive rock formed from lava that erupts and cools on the surface.

Magma is generated from mantle material at several plate tectonics situations by three types of melting: decompression melting, flux melting, or heat-induced melting.

Composition refers to a rock's  
chemical and mineral make-up. For  
igneous rock, the composition is  
divided into four groups: felsic,  
intermediate, mafic, and ultramafic.  
These groups refer to differing  
amounts of silica, iron, and  
magnesium found in the minerals that
