Hayashi Econometrics: Answers to Selected Review Questions Chapter 2 Section 2.1 1. For nsufficiently large,  $|z_n| < \epsilon$ , which means  $\text{Prob}(|z_n| > \epsilon) = 0$ . 2. The equality in the hint implies that  $\lim_{n \rightarrow \infty} E[(z_n - z)^2] = 0$  if and only if  $\lim_{n \rightarrow \infty} E[(z_n - z_k)^2] = 0$  for all  $k$ . Section 2.2 6. Because there is a one-to-one mapping between (g

Chapter 2

An easy answer is  $\{x_i\}$  being an  $\mathcal{R}_1$ -measurable, ergodic, stationary process where  $\mathcal{R}_1$  is the smallest  $\sigma$ -field generated by  $\{X_k, k \geq 0\}$ . But the measurability assumption may be too restrictive. Besides this simple answer, it seems difficult to obtain a useful answer to the question. In a nutshell, the assump-

Chapter 2, Exercise Answers Principles of Econometrics, 4e 4 Exercise 2.3 (Continued) (d)  $\hat{e}_i = 0.714286 - 0.228571x_1 - 0.257143x_2 + 0.257143x_3 - 1.228571x_4 + 1.285714x_5$  (e)  $\hat{e}_i = 0.714286 - 0.228571x_1 - 0.257143x_2 + 0.257143x_3 - 1.228571x_4 + 1.285714x_5$  EXERCISE 2.6 (a) The intercept estimate  $b_1 = 240$  is an estimate of the number of sodas sold when the temperature is 0 degrees Fahrenheit.

Answers to Selected Exercises - Econometrics  
The convention in econometrics is to use the character  $Y$  to denote the variable to be explained, while the characters  $X$  and  $Z$  are used to denote the conditioning (explaining) variables. Following mathematical practice, random variables and vectors are denoted by upper case roman characters such as  $Y$  and  $X$ .

Hayashi Econometrics Solution to Chapter 1 Analytical Exercises 1. (Reproducing the answer on p. 84 of the book) 
$$e = (y - X\beta) = [(y - X\beta) + X(\beta - \beta)] = (y - X\beta) + X(\beta - \beta)$$
 (by the add-and-subtract strategy) 
$$e = (y - X\beta) + X(\beta - \beta)$$

Econometrics : Practice Questions (With Video Solutions)

Hayashi Econometrics: Answers to Selected Review Questions Chapter 3 Section 3.1 1. By (3.1.3a),  $\text{Cov}(p_i, u_i) = \text{Cov}(v_i, u_i) / \text{Var}(u_i) \neq 1$ . The numerator can be positive. 2. The plim of the OLS estimator equals  $\beta_0 + \beta_1 \text{Cov}(p_i, u_i) / \text{Var}(p_i) E(p_i)$ . 4. By (3.1.10a),  $\text{Cov}(p_i, u_i) = \text{Var}(u_i) / (\beta_1 \neq 1) \neq 0$  and  $\text{Cov}(p_i, \epsilon_i) = \text{Var}(\epsilon_i) / (\beta_1 \neq 1) \neq 0$ . x

Chapter 3

Chapter 10 Solutions to Exercises 2 expectations. Negative signs for  $b_2$  and  $b_4$  imply that, as someone ages, his or her pizza consumption will decline, and the decline will be greater the higher the level of income.

Solutions to Exercises in Chapter 10

Hayashi's Econometrics promises to be the next great synthesis of modern econometrics. It introduces first year Ph.D. students to standard graduate econometrics material from a modern perspective. It covers all the standard material necessary for understanding the principal techniques of econometrics from ordinary least squares through cointegration.
