Small Signal Model of a BJT • Just as we did with a p-n diode, we can break the BJT up into a large signal analysis and a small signal analysis and “ linearize ” the non-linear behavior of the Ebers-Moll model. • Small signal Models are only useful for Forward active mode and thus, are derived under this condition. (Saturation and cutoff are

BJT Small Signal Models Conceptually, the signal we wish to amplify is connected in series with the bias source and is of small amplitude. We will linearize the signal analysis to simplify our mathematics – to avoid having to deal with the nonlinear exponential collector current  $i_C = I_S e^{v_{BE}/V_T} - V_{CC} - V_{BR}$
