This new, updated edition provides a lively, lucid and compelling introduction to contemporary controversies over the self and self-identity in the social sciences and humanities. In an accessible and concise format, the book ranges from classical intellectual traditions of symbolic interactionism, psychoanalysis and Foucauldian theory, through feminism and postfeminism, to postmodernism and the mobilities paradigm. With characteristic verve and clarity, Anthony Elliott explores the relationship between power, identity and personhood, connecting varied theoretical debates directly to matters of contemporary relevance and urgency, such as identity politics, the sociology of personal relationships and intimacy, and the politics of sexuality. This edition also includes a new chapter on the digital revolution, which situates the self and work/life transformations within the context of AI, Industry 4.0, advanced robotics and accelerating automation. Offering thoughtful entry points to a rich and complex literature, along with robust critical responses to each theory, Concepts of the Self will continue to be an invaluable text for students of social and political theory, sociology, social psychology, cultural studies, and gender studies.

Statistical Concepts consists of the last 9 chapters of An Introduction to Statistical Concepts, 3rd ed. Designed for the second course in statistics, it is one of the few texts that focuses just on intermediate statistics. The book highlights how statistics work and what they mean to better prepare students to analyze their own data and interpret SPSS and research results. As such it offers more coverage of non-parametric procedures used when standard assumptions are violated since these methods are more frequently encountered when working with real data. Determining appropriate sample sizes is emphasized throughout. Only crucial equations are included. The new edition features: New co-author, Debbie L. Maha-Vaughn, the 2007 recipient of the University of Central Florida's College of Education Excellence in Graduate Teaching Award. A new chapter on logistic regression models for today's more complex methodologies. Much more on computing confidence intervals and conducting power analyses using G*Power. All new SPSS version 19 screenshots to help navigate through the program and annotated output to assist in the interpretation of results. Sections on how to write-up statistical results in APA format and new templates for writing research questions. New learning tools including chapter-opening vignettes, outlines, a list of key concepts, "Stop and Think" boxes, and many more examples, tables, and figures. More tables of assumptions and the effects of their violation including how to test them in SPSS. 33% new conceptual, computational, and all new interpretative problems. A website with Power Points, answers to the even-numbered problems, detailed solutions to the odd-numbered problems, and test items for instructors, and for students the chapter outlines, key concepts, and datasets. Each chapter begins with an outline, a list of key concepts, and a research vignette related to the concepts. Realistic examples from education and the behavioral sciences illustrate those concepts. Each example examines the procedures and assumptions and provides tips for how to run SPSS and develop an APA style write-up. Tables of assumptions and the effects of their violation are included, along with how to test assumptions in SPSS. Each chapter includes computational, conceptual, and interpretive problems. Answers to the odd-numbered problems are provided. The SPSS data sets that correspond to the book's examples and problems are available on the web. The book covers basic and advanced analysis of variance models and topics not dealt with in other texts such as robust methods, multiple comparison and non-parametric procedures, and multiple and logistic regression models. Intended for courses in intermediate statistics and/or statistics II taught in education and/or the behavioral sciences, predominantly at the master's or doctoral level. Knowledge of introductory statistics is assumed.

DIGITAL MEDIA, CONCEPTS AND APPLICATIONS. 3E prepares students for the multimedia-rich workplace by teaching them multimedia concepts as well as business-standard software applications to complete projects and solve problems. The non-software-specific text approach gives students a strong foundation in the concepts and practices of digital multimedia and allows the text to focus on the more creative end of business technology. If needed, software-specific directions to assist in learning can be found on the website. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Over the course of 20 years, this text has approached case management as both an art and a science by providing students and practitioners with the basics of case management theory, skills, and applications. This fourth edition, which focuses on both the social work and nursing professions, offers trainers, instructors, and students detailed information about how case management is delivered, major issues encountered in practice, how services are affected by different populations, and the unique skills that are required by case managers in order to be effective. Chapter exercises and case examples help readers practice some of the skills associated with the content offered. Case Management is unique in that it brings together the major professions that conduct case management in the United States. It is focused on skill learning more than theory, and discusses not only the importance of case management in the current social work and medical milieu, but also the challenges that case managers face in helping clients. Additionally, the text offers a model for integrated case management between professions and in numerous settings, including nursing centers, community mental health facilities, and criminal justice centers.

"Key Concepts for Understanding Curriculum", originally published in 1992, includes 21 key topics in the field and is divided into six sections, including: curriculum planning and development; curriculum management; teaching perspectives; collaborative involvement in curriculum; and curriculum ideology. Intended primarily for courses in computer concepts and office applications, this text also provides practical content to current and aspiring industry professionals. This book teaches computer concepts and applications together. It engages readers rightaway by using a jobs-focused approach that integrates computer concepts and applications into practical combinations of concepts and skills in the context of a job. With this approach, readers learn how to work in the real world where they will solve problems using computer concepts and skills related to the Internet, Microsoft Office 2013 applications, collaboration, social media, and cloud computing.
