economist Nouriel Roubini electrified the financial community by predicting the 2008 crisis before others in his field saw it coming. This myth-shattering book reveals the methods he used to foretell the current crisis and shows how those methods can help us make sense of the present and prepare for the future. Using an

unconventional blend of historical analysis with masterful knowledge of global economics, Nouriel Roubini and Stephen Mihm, a journalist and professor of economic history, present a vital and timeless book that proves calamities to be not only predictable but also preventable and, with the right medicine, curable.

One man saw it coming.

As far back as 2005,

Professor Nouriel

Roubini aka Dr Doom

warned that the US

housing bubble was set to

crash, and what would

begin as a national

disease would soon

spread overseas resulting

in a deep recession. Free

market fundamentalism

would fail and we'd be

faced with the worst economic crisis in history, crippling our global economy and bringing the world's financial systems to a shuddering halt. Sound familiar? By guiding us through a crash course in 'crisis economics' - black swans and white swans, pressure points in the global economy, crises that extend beyond

national borders and bubbles in the financial sector that spill over into the real economy -

Roubini shows us that boom to bust economics does not have to be destiny. Roubini offers a course for the future: radical reform of the international financial order and a clear view of regulation, supervision and greater coordination

about the purposes for which money was originally invented. The Big Ideas chapter builds up a picture of the key ideas that have driven economic theories.

Economics and People derives insights into the way that money and economics works from the way that people actually behave.
