This is the first comprehensive study guide covering all aspects of pediatric critical care medicine. It fills a void that exists in learning resources currently available to pediatric critical care practitioners. The major textbooks are excellent references, but do not allow concise reading on specific topics and are not intended to act as both text and study guide. There are also several handbooks available, but these are usually written for general pediatric residents and lack the advanced physiology and pathophysiology required for the higher level pediatric critical care practitioner

Critical care medicine is one of the fastest-growing areas of practice, and Critical Care Study Guide, 1st ed., was the first reference to combine both concise text and reviews with questions. The second edition expands and improves coverage, including comprehensive studies in airway management, cardioversion and defibrillation, medical ethics, and the use of blood products. The unique combination of text with questions and answers makes this a crucial reference for all practitioners and residents who see patients in the Intensive Care Unit, and those planning to sit for medical boards.

This extensively updated textbook is a comprehensive study guide that covers pediatric critical care principles and specific disease entities commonly encountered by the pediatric critical care medicine (PCCM) practitioner. Pathophysiologic aspects unique to the pediatric patient are emphasized. The first edition has become a highly utilized text for pediatric critical care fellows. The second edition will prove even more valuable to the fellow in-training and indeed to any clinical pediatric intensivist. In addition to updating the chapters from the previous edition, there are new chapters on topics such as central nervous structure and function, palliative care, child abuse and practical biostatistics. Pediatric Critical Care: Text and Study Guide is an invaluable clinically focused resource for PCCM practitioners. Allowing for concise reading on specific topics, this book acts as both text and study guide covering advanced physiology, pathophysiology, diagnostic considerations and treatment approaches that should be mastered by the higher level PCCM practitioner. The large number of illustrations complements the text in each chapter that also includes key references and case-orientated questions that help reinforce important ideas learned in the chapter.

As a registered nurse for the last 28 years, my primary clinical expertise has been working in the pre-hospital environment as a flight nurse and a paramedic, as well as continuing to work in a variety of clinical areas which include the emergency department, pediatrics and endoscopy. My extensive clinical background has also given me the opportunity to work as a legal nurse consultant with one of the largest law firms in Arizona. As an EMS educator and program director of paramedic training programs for the last 20 years and most recently as the National Clinical Educator for one of the largest air medical transport companies, I truly enjoy teaching in a simple manner as to assure that students do have a strong basic understanding in making critical care decisions and that they will be providing the highest quality of patient care beginning from the least to the most invasive management of care for the patients they are transporting. My goal as a professional and as an EMS educator has always been and will continue to encourage students to have the desire to learn and grow in their profession, as well as contribute to EMS in a way that inspires positive change.
