A measure is a formula that is created specifically for use in a PivotTable (or PivotChart) that uses Power Pivot data. Measures can be based on standard aggregation functions, such as COUNT or SUM, or you can define your own formula by using DAX. A measure is used in the Values area of a PivotTable.

Data Analysis Expressions (DAX) in Power Pivot - Excel
Power Pivot provides Data Analysis Expressions (DAX) for creating custom calculations in Power Pivot tables and in Excel PivotTables. DAX includes some of the functions that are used in Excel formulas, and additional functions that are designed to work with relational data and perform dynamic aggregation. Here are some basic formulas that could be used in a calculated column:

Create Formulas for Calculations in Power Pivot - Excel
Build your DAX expression on the PowerPivot Formula bar more or less as you build an Excel formula in a cell of one of its worksheets. To use a DAX function in the expression, click the Insert Function button on the PowerPivot Formula bar and select the function to use in the Insert Function dialog box (which is very similar to the standard Excel Insert Function dialog box except that it contains only DAX functions).

How to Use DAX in Excel's PowerPivot Add-In - dummies
A measure is a formula for the values area of Power Pivot table. A measure can be implicit or explicit. Implicit measures are created automatically when you drag and drop a field in to Power Pivot values area. For example, in last week's introduction, we created an implicit measure for SUM of Sales by dragging and dropping the sales amount field in to values area of our power pivot table ...

Introduction to DAX Formulas & Measures for Power Pivot ...
DAX Formulas. The formula starts with an equal sign. The string after the equal sign specifies the calculation method. Arguments are entered inside parentheses. The first argument of the IF function is a logical test that determines which argument is to be returned. The first argument includes a ...

How to use DAX Functions in Pivot Tables
In this post, I describe a quick way to list all the DAX formulas in your PowerPivot for Excel 2010 Data model. I scoured the internet and learned about a brilliant method that establishes a connection with the PowerPivot Model's internal schematics, and quickly lists all the DAX formulas from your PowerPivot model in an Excel Table.

How To Quickly Get A List All DAX Formulas From Your Excel ...
Not all DAX functions are supported or included in earlier versions of Power BI Desktop, Analysis Services, and Power Pivot in Excel. Examples Many reference articles contain examples showing formulas and results created in an Excel workbook with a Power Pivot in Excel data model.

DAX function reference - DAX | Microsoft Docs
This book is the first to tackle DAX formulas, the core capability of Power Pivot, from the perspective of the Excel audience.
