The debug server setup is the same, but each client (IDE or CLI) will have a slightly different setup. See, the debug server (a Zend extension) opens a port, and the client communicates with the server through that port. It's just a matter of configuration and installing the right components. Here are the steps I'm taking on this journey:

A Detailed Guide to PHP Debugging – Stackify
Debugging messages are intended to help diagnose problems and/or help Moodle developers. If you have a problem with your Moodle site and ask for help in a Moodle.org forum, a developer may ask you to turn enable debugging i.e. turn debugging messages on, in order to locate the cause of the problem.
