Despite the vast amount of research on teaching, very little of it has related overall theoretical perspectives to general principles of teaching and instruction. Keenly aware of this, Ornstein's primary criteria for selection of the material in this book is its value to those concerned with the practice of teaching and instruction and with the interaction of students with teachers. Institutionalized Learning in America mixes theory and practice, presenting proven methods that are based on research and that have been demonstrated to work. No one set of strategies or methods is offered, providing the reader with the opportunity to select from many different approaches. The book is divided into four parts and twenty chapters. Part I, on teaching, provides an overview of research on teaching and teacher effectiveness. Part II, on learning, discusses how information to be learned is organized and taught, as well as how to evaluate what has been learned. Part III, on instruction, emphasizes planning and organizing content and experience in a meaningful way. Part IV deals with effective schools. Institutionalized Learning in America will be of interest to researchers and practitioners of the art of teaching, as well as those interested in applications of cognitive psychology.

Library Journal Best Reference 2009 Educators have begun to recognize that identifying and accommodating students who are slower to learn may leave behind those who learn rapidly and think creatively. The nature of intelligence, the sources of innovation, and the ways to nurture special abilities are now topics of great interest to scholars in a wide variety of disciplines and to the general public. Policymakers, ranging from school board members to leaders of nations, must also make practical decisions about how communities and societies will treat their brightest, most promising students. With more than 400 entries, these two volumes review research findings on giftedness, talent, and creativity and their effect on education, training, science and the arts, government policy, and everyday life. The Encyclopedia of Giftedness, Creativity, and Talent provides a balanced, objective assessment of the various perspectives on the nature of intelligence, innovation, and optimal states. This state-of-the-art resource covers all major facets of the field, including achievement motivation, artistic ability, creative personality, emotional intelligence, gender differences, genius, intelligence testing, learning styles, minority underrepresentation, multiple intelligences, musical ability, prodigies, scientists, self actualization, thinking skills, and more. Key Themes Assessment and Identification Creativity Studies Cultural Issues Education Eminent People Exceptionalities Intelligence Neuroscience and Genetics Populations Programs and Interventions Psychological Issues Talent Domains Theories and Models Key Features Provides a balanced and critical discussion of the controversies that have animated research and theory making Clarifies which grouping and instructional strategies promote the best outcomes in achievement and social/emotional development of gifted children Helps educators make informed decisions about the identification strategies and the curriculum models that best meet their students' needs Contains thousands of pertinent facts from the fields of education, psychology, sociology, and the arts Evaluates policies that have hindered gifted children and makes a persuasive case for appropriately challenging and differentiated education Examines how giftedness, creativity, and talent were defined in the past and how current meanings have emerged.

In Divergent Paths to College, Megan M. Holland examines how high schools structure different pathways that lead students to very different college destinations based on race and class. She finds that racial and class inequalities are reproduced through unequal access to key sources of information, even among students in the same school and even in schools with well-established college-going cultures. As the college application process becomes increasingly complex and high-stakes, social capital, or relationships with people who can provide information as well as support and guidance, becomes much more critical. Although much has been written about the college-bound experience, we know less about the role that social capital plays, and specifically how high schools can serve as organizational brokers of social ties. The relationships that high schools cultivate between students and higher education institutions by inviting college admissions officers into their schools to market to students, is a particularly critical, yet unexplored source of college information.

This student guide actively involves students in the text material, using a variety of engaging exercises and study tools. In recent decades, the lives of people in their late teens and twenties have changed so dramatically that a new stage of life has developed. In an original paper published in 2000, Jeffrey Jensen Arnett identified this period, coining it "emerging adulthood," and he distinguished it from both the adolescence that precedes it and the young adulthood that comes in its wake. His new paradigm received a surge of scholarly attention after his first book on the topic launched the field, and both a flourishing society and journal developed to further expand this area of research. Studies and publications on emerging adulthood now abound, and the leading research has yet to be organized into a single handbook that covers the field. The Oxford Handbook of Emerging Adulthood is the first and only comprehensive compilation

spanning the field of emerging adulthood. Expertly edited by Arnett, this Handbook is comprised of cutting-edge chapters written by leading scholars in developmental psychology. Topics include theoretical perspectives and structural influences in the field; cognitive development during emerging adulthood; family, friendship, and romantic relationships; sexual identity and orientation; education and work; leisure and media use; mental health; religious and political beliefs; positive development; and substance abuse and crime, to name a few. Sure to be the definitive resource for researchers, scholars, and students studying emerging adulthood, this Handbook will pave the way for new scholarship in this expanding area of inquiry and serve as an excellent resource for the wider field of developmental psychology.

Society forges ahead in the process of solving various contradictory problems and it is ceaselessly innovating. In the current educational environment, there has been a shift towards online learning as a replacement for the traditional in-person classroom experience. With this new environment comes new technologies, benefits, and challenges for providing courses to students through an entirely digital environment. With this shift comes the necessary research on how to utilize these online courses and how to develop effective online educational materials that fit student needs and encourage student learning, motivation, and success. The optimization of these online tools requires a deeper look into curriculum, instructional design, teaching techniques, and new models for student assessment and evaluation. Information on how to create valuable online course content, engaging lesson plans for the digital space, and meaningful student activities online are only a few of many current topics of interest for promoting student achievement through online learning. The Research Anthology on Developing Effective Online Learning Courses provides multiple perspectives on how to develop engaging and effective online learning courses in the wake of the rapid digitalization of education. This book includes topics focused on online learners, online course content, effective online instruction strategies, and instructional design for the online environment. This reference work is ideal for curriculum developers, instructional designers, IT consultants, deans, chairs, teachers, administrators, academicians, researchers, and students interested in the latest research on how to create online learning courses that promote student success.

The Fourth Industrial Revolution is introducing automation technology into all major disciplines, including business, engineering, and education. Higher education institutions need to incorporate this digital transformation in order to remain competitive. *Redesigning Higher Education Initiatives for Industry 4.0* is an essential reference source that discusses education strategies for human-computer interactions in an automated world and the role of education in conjunction with artificial intelligence and virtual technologies. Featuring research on topics such as e-learning, mobile devices, and artificial intelligence, this book is ideally designed for professionals, IT specialists, researchers, librarians, administrators, and educators.

Some old ideas can become very new. This is the case of the notion of creativity in psychology. Traditionally conceptualized in the narrow framework of the amazing things poets, composers, painters, and scientists do, creativity research had reached an impasse in its efforts to locate creativity within the confines of personality characteristics. This is the time for change. The New Look at creativity that is rooted within the sociocultural tradition in psychology and elaborated in the present book finds creativity in each and every moment of our everyday lives. We are creative when we move around in the streets, dance tango, fool around with our self-images while shopping for clothes, or resist pre-given recipes while cooking dinners. We are being creative even in our bedrooms where we perform the difficult tasks of falling asleep or waking up through arrays of sleep inducers and alarm clocks, not to speak of the time we spend in the very state of sleep. All our actions at night—ranging from what we later call nightmares--or dreams—are arenas of creativity even if we may barely remember what we have done. The present monograph by Lene Tanggaard constitutes a powerful multi-pronged exposition of the New Look at Creativity. Its starting point is in the move to pay attention to the processes of acting in everyday life—rather than start from the classification of products of human actions into classes of “ creative ” versus “ non-creative. ”
