By successfully combining theory and practice, this page-by-page course provides the tools and information necessary for any artist to develop strong observational, organizational, and expressive drawing skills. The instructions include a discussion of the uses and history of drawing materials; then they present the basics of composition and controlling representational shading. Seven distinct shading techniques, including various forms of crosshatch shading, charcoal techniques, and shading with colored pencils, are laid out in detail and supplement a variety of compositional ideas. Read through this volume as a comprehensive primer in drawing, or refer to it as needed to answer questions or refine particular skills. A supplemental glossary is included to explain technical terms.

Children need the chance to explore and understand where they live and all the places surrounding them to make sense of their world. Through geography, children can feel a connection with people they have never met and places they have never been. Through these connections, children can be inspired to care about their place and their communities. This book includes chapters explaining the concepts of location, perspective, scale, orientation, map symbols and map keys, and the five themes of geography. In addition, chapters are included on various types of maps and the use of technology to teach map skills. There are suggestions for 100 activities to teach the concepts, assessment questions, and annotated children's literature that relate to the concepts. The book includes a suggested scope and sequence for teaching map skills in the elementary grades and a glossary of geographic terms.
