Months And Years After Surgery

The metabolism of your body increases temporarily under stress. Even if you are eating well, the body continues to lose calories due to the high metabolic activities in it resulting in weight loss. Inactivity – Stress makes your body quite inactive. If you used to work out every day pre-stress, be it in the gym or at home, it has been seen that in most cases, once you are stressed about something you lose all interest in exercising and staying fit.

Months And Years After Surgery

Weight often returns to normal when you start to feel happier, after you've had time to grieve or get used to the change. Counselling and support may be needed to help you get to this stage. Significant weight loss can also be the result of an eating disorder, such as anorexia or bulimia. If you think you have an eating disorder, talk to someone you trust and consider speaking to your GP.
