Did you ever walk out of class having even more questions than when you walked in? You may feel that way about History or Math, but what about your Sexual Health class (if you even had one)? If you're anything like most of the youth in America today, your head is probably spinning with a swirling, high-speed hurricane of questions. It is totally normal to be curious and to have questions about relationships, bodies, consent . . . you name it! But where can your average teen go to get all the reliable and accurate answers they need? In Case You're Curious (CYC), a text-and-answer program conceived by Planned Parenthood, has been providing this educational service for teens for years. And now In Case You're Curious: Questions about Sex from Young People with Answers from the Experts is a big book of answers with funny and educational illustrations, to the most popular and most interesting questions young people have about birth control, development, sexually transmitted diseases, and so much more. Within these pages you will find non-judgmental (and fun!) answers meant to educate teens without the uncomfortable silence or weird eye contact often associated with "The Talk." With questions like "Does masturbating give you a disease?" and "Is the pineapple thing true?" In Case You're Curious isn't afraid to tackle the nitty-gritty questions you may think twice about raising your hand to ask in your Sexual Health class or at home.

Over two previous editions, *Exploring Anatomy & Physiology in the Laboratory* (EAPL) has become one of the best-selling A&P lab manuals on the market. Its unique, straightforward, practical, activity-based approach to the study of anatomy and physiology in the laboratory has proven to be an effective approach for students nationwide. This comprehensive, beautifully illustrated, and affordably priced manual is appropriate for a two-semester anatomy and physiology laboratory course. Through focused activities and by eliminating redundant exposition and artwork found in most primary textbooks, this manual complements the lecture material and serves as an efficient and effective tool for learning in the lab.

Next Generation Science Standards identifies the science all K-12 students should know. These new standards are based on the National Research Council's A Framework for K-12 Science Education. The National Research Council, the National Science Teachers Association, the American Association for the Advancement of Science, and Achieve have partnered to create standards through a collaborative state-led process. The standards are rich in content and practice and arranged in a coherent manner across disciplines and grades to provide all students an internationally benchmarked science education. The print version of Next Generation Science Standards complements the nextgenscience.org website and: Provides an authoritative offline reference to the standards when creating lesson plans Arranged by grade level and by core discipline, making information quick and easy to find Printed in full color with a lay-flat spiral binding Allows for bookmarking, highlighting, and annotating

This brief version of *Exploring Anatomy and Physiology in the Laboratory, 3e*, is intended for one-semester anatomy and physiology courses geared toward allied health students. *Exploring Anatomy & Physiology Laboratory: Core Concepts*, by Erin C. Amerman is a comprehensive, beautifully illustrated, and affordably priced lab manual that features an innovative, interactive approach to engage your students and help ensure a deeper understanding of A&P.

This full-color manual is a unique guide for students conducting the comparative study of representative vertebrate animals. It is appropriate for courses in comparative anatomy, vertebrate zoology, or any course in which the featured vertebrates are studied.

This newest addition to the best-selling *Microbiology: Laboratory Theory & Application* series of manuals provides an excellent value for courses where lab time is at a premium or for smaller enrollment courses where customization is not an option. The Essentials edition is intended for courses populated by nonmajors and allied health students and includes exercises selected to reflect core microbiology laboratory concepts.

*Discovering Anatomy: A Guided Examination of the Cadaver* is designed for anatomy courses that are fortunate enough to have cadavers available; however, it may also be used in courses that utilize other means, such as models, to achieve an understanding of anatomical structures. The majority of this workbook is composed of full-page color photographs of carefully dissected cadavers, black-and-white line art to color and label, and other activities to guide students through the structures and layers of the human body.

The *Visual Analogy Guides to Human Anatomy & Physiology, 3e* is an affordable and effective study aid for students enrolled in an introductory anatomy and physiology sequence of courses. This book uses visual analogies to assist the student in learning the details of human anatomy and physiology. Using these analogies, students can take things they already know from experiences in everyday life and apply them to anatomical structures and physiological concepts with which they are unfamiliar. The study guide offers a variety of learning activities for students such as, labeling diagrams, creating their own drawings, or coloring existing black-and-white illustrations to better understand the material presented.

*Exploring Biology in the Laboratory: Core Concepts* is a comprehensive manual appropriate for introductory biology lab courses. This edition is designed for courses populated by nonmajors or for majors courses where abbreviated coverage is desired. Based on the two-semester version of *Exploring Biology in the Laboratory, 3e*, this *Core Concepts* edition features a streamlined set of clearly written activities with abbreviated coverage of the biodiversity of life. These exercises emphasize the unity of all living things and the evolutionary forces that have resulted in, and continue to act on, the diversity that we see around us today.
