Designed for engineers, this work considers flow-induced vibrations. It covers topics such as body oscillators; fluid loading and response of body oscillators; fluid oscillators; vibrations due to extraneously-induced excitation; and vibrations due to instability-induced excitation.

First published in 2004. Routledge is an imprint of Taylor & Francis, an informa company.

Cognitive models and software tools have been widely used for both research and commercial purposes. Although they have proved very useful, there are some limitations preventing large-scale modeling and simulation tasks to be carried out efficiently and effectively. In this book, we aim to provide readers with a systematic overview of state-of-the-art cognitive modeling software tools and applications and an introduction to a new software framework for facilitating large-scale modeling and simulation of human-performance tasks. The authors first review cognitive modeling theories and then present an overview of state-of-the-art software tools for cognitive modeling and simulation. Finally, the book focuses on the new software framework and a research prototype called CogTool+, including how to incorporate behavioral data such as eye-tracking data in modeling and simulation tasks. Typical applications of CogTool+ in HCI and cyber security are given to demonstrate its usefulness.

The book has a solid practical feel to it, and although it deals philosophically with leading theorists such as Foucault, Goffman, Bourdieu and Hall it grounds the practice of visual research into everyday use... Weaved cleverly throughout are numerous practical exercises which draw together the theoretical concepts and give them a grounded rational element. This book is a valuable research tool and I would anticipate that many researchers will find it a worthwhile addition to their armoury' - Mental Health Care Providing a comprehensive introduction to the entire field of visual research, this book reviews the contributions of traditions as diverse as semiotics, ethnomethodology, symbolic interactionism and

Japanese companies operating internationally resemble Western multinationals only superficially. They are 'reluctant' because outward economic dependency compels them to venture overseas - into environments where they cannot enjoy the same high degree of control and support that they do in Japan. There is no generally accepted view of Japanese management among writers in Europe and America and yet effective management has been a major factor in the advance of Japanese companies. The different approaches to Japanese management and its basic concepts are discussed here, together with the problems of multinationalization. First published in 1983, this title is part of the Bloomsbury Academic Collections series.

Qualitative researchers have traditionally been cautious about claiming that their work was scientific. The "right-on" schools have exaggerated this caution into an outright rejection of science as a model for their work. Science is, for them, outmoded; "an archaic form of consciousness surviving for a while yet in a degraded form" (Tyler 1986:200). Scientists' assertions that they are in pursuit of truth simply camouflage their own lust for power. There is no essential difference between truth and propaganda.The authors acknowledge that the boundary between science and propaganda has often been breached and some distrust of scientific claims may be healthy. They also question the claim that science creates disinterested and objective knowledge of an observer-independent world without concluding that science is impossible. The skeptics' reservations about qualitative research are based on the deep-rooted assumption among natural scientists, and some social scientists, that there is a world "out there," prior to, and independent of, their observations. This world can be known objectively in the sense that all observers will, if identically placed, see it in exactly the same way. If a suitable language were available, they would also all produce identical descriptions. From these observations they can work out the laws governing the world's operations. The authors try to resolve these contrary claims by asserting that science is a procedural commitment. It consists of openness to refutation, a conscientious and systematic search for contradictory evidence, and a readiness to subject one's preconceptions to critical examination. The devotion to truth as a regulative ideal is an essential difference between science and propaganda. This work is a unique and innovative defense of scientific method.

" Deftly avoiding both the zealous idealism of the policymaker and the cynical realism of the practitioner, the contributions to this volume offer empirically grounded, culturally nuanced analyses of university internationalisation in practice. Recommended reading for anyone interested in Japanese higher education today, and a fine example of how to blend engaging 'insider' stories with rigorous scholarly analysis." – Jeremy Breden, PhD (Melbourne), Lecturer in Japanese Studies, School of Languages, Literatures, Cultures and Linguistics, Faculty of Arts, Monash University " An excellent timely publication! This book brings together critical insights and multi-dimensional understandings of internationalization, and international and intercultural practices in Japanese higher education. It will be an important sourcebook, a must-read for all interested in Japanese higher education and internationalization. It will certainly raise the bar of competencies and knowledge of the field." – Terri Kim, PhD (London), Reader in Comparative Higher Education, Leader of the Higher Education Research Group, University of East London
