Description. Muscle Energy Technique (MET) is a form of a manual therapy which uses a muscle ' s own energy in the form of gentle isometric contractions to relax the muscles via autogenic or reciprocal inhibition, and lengthen the muscle. As compared to static stretching which is a passive technique in which therapist does all the work, MET is an active technique in which patient is also an active participant.

Muscle Energy Technique. Popularly known simply as MET, muscle energy technique is a form of stretching commonly used by sports massage therapists, sports therapists, osteopaths and some physiotherapists, chiropractors and fitness professionals. There is no standardized definition of this technique, which involves the active contraction of a muscle by the client against a resistive force provided by a second party (i.e., the therapist).
