12th Biology Shanti Guess paper 2020 PSEB ~~Primate Taxonomy By Groves C~~ With more than 400 species of primates recognized, we now need finer degrees of classification than just dividing the primates into families, the families into genera, the genera into species. By common consent, the order Primates is divided into suborders, these into infraorders, these into superfamilies, these into families, these into subfamilies, these into tribes, these into subtribes, and these into genera.

~~Colin Groves' Taxonomy Introduction - All The World's Primates~~
Goodman et al. in 1998, followed by Groves in 2001, suggested that we organize taxonomic rankings only within particular classes, acknowledging that the time/rank associations in mammals and birds would be very different from those in amphibians, and these in turn would be very different from those in insects. They proposed that within mammals we should recognize as orders those taxa that separated from their closest relatives around the Cretaceous-Tertiary (K/T) boundary; as families ...

Groves also wrote Primate Taxonomy published by the Smithsonian Institution Press in 2001, and Ungulate Taxonomy, co-authored by Peter Grubb (2011, Johns Hopkins Press). He was an active member of the Australian Skeptics and had many published skeptical papers, as well as research papers covering his other research interests.

~~Colin Groves — Wikipedia~~

The author of the landmark Primate Taxonomy, Colin Groves is formally known as a Professor of Biological Anthropology at the Australian National University, but he has been acknowledged as "the senior statesman, philosopher, and historian of primatology." With his new book Extended Family, Colin Groves has created a work which is both unique to its field and an essential prerequisite – a compact history of the Western world's gradually deepening awareness of the primate order.

~~Primates SG — Colin Groves, Extended Family: Long Lost Cousins~~

Taxonomy has a well-defined role, which is much more than simply stamp-collecting and pigeon-holing. Species are the units of classification, biogeography and conservation; as such they must be defined as objectively as possible. The biological species concept, still widely used in biology, though predominantly by non-taxonomists and all too often misunderstood, is a process-based concept ...
