Psychogenic Movement Disorders and Other Conversion ...

Recent findings: Psychogenic movement disorders, also referred to as functional movement disorders, describe a group of disorders that includes tremor, dystonia, myoclonus, parkinsonism, speech and gait disturbances, and other movement disorders that are incongruent with patterns of pathophysiologic (organic) disease. The diagnosis is based on positive clinical features that include variability, inconsistency, suggestibility, distractibility, suppressibility, and other supporting information.

Psychogenic (Functional) Movement Disorders

Psychogenic movement is an unwanted muscle movement such as a spasm or tremor that is caused by an underlying psychological condition. Psychogenic movement can involve any part of the body and resemble the same muscle movements that occur with a biological condition or structural abnormality.

Psychogenic Movement - BrainFacts

The term functional (psychogenic) movement disorders (FMD) has historically been applied to disorders that manifest with physical symptoms—specifically abnormal movements (gait disorders, tremor, dystonia, etc.)—but which cannot be attributed to any of known underlying organic disorder and which instead is presumed to be due to “ psychological factors ” .
