A honey bee (also spelled honeybee)
is a eusocial flying insect within the
genus *Apis* of the bee clade, all native
to Eurasia but spread to four other
continents by human beings. They are
known for their construction of
perennial colonial nests from wax, the
large size of their colonies, and
surplus production and storage of
honey, distinguishing their hives as a
prized foraging target of many ...

It is, without a doubt, the most rare of North American bee species, assuming it is still living. In regard to Sinomelecta, it may be tantalizing to suspect that Sinomelecta oreina, with its various external features reminiscent of Palearctic Melecta [e.g., Melecta (Melecta) emodi Baker], is merely an autapomorphic species of that genus with its two submarginal cells and reduced flagellar count in males.
