This book highlights lateral management as the answer to the strategic opportunities and challenges posed by digital transformation. Digitalization is now changing the economy and society as dramatically as the dawn of electrification a century ago. Production methods, products, sales structures, marketing, and even markets themselves are set to change in the digital era. In addition to introducing readers to the concept of lateral management, and detailing the structure and functioning of 'lateral companies', the authors show how leadership and cooperation norms carried over from the 20th century need to be adapted for the digital era. They demonstrate the opportunities that digitalization offers companies, employees and managers in terms of enhancing their freedom, individuality, job diversity, and creative and innovative power. The authors also provide a unique management instrument, the 'Lateral Culture Index®', which measures the hierarchies of leadership; provide new benchmarks; and identify seven essential factors for lateral companies. Readers will learn how to implement lateral management in their companies and be familiarized with the instruments that can help them do so.

Examines the structure and management of family-owned businesses, from small companies to multinational conglomerates, discussing how they differ from public companies and how they move through generational changes in leadership

In this new textbook, Andrea Colli gives a historical and comparative perspective on family business, examining through time the different relationships within family businesses and among family enterprises, inside different political and institutional contexts. He compares the performance of family businesses with that of other economic organizations, and looks at how these enterprises have contributed to the evolution of contemporary industrial capitalism. Central to his discussion are the reasons for both the decline and persistence of family business, how it evolved historically, the different forms it has taken over time, and how it has contributed to the growth of single economies. The book summarises previous research into family business, and situates many aspects of family business - such as their strategies, contribution, failure and decline - in an economic, social, political and institutional context. It will be of key interest to students of economic history and business studies.

This book analyzes the findings reported in the first Asia Pacific summit of the Successful Transgenerational Entrepreneurship Practices (STEP) project. Researchers in Australia, China, and India discussed eleven in-depth case studies to shed light on the challenges that business families and family businesses faced in continuing and extending their entrepreneurial capabilities across multiple generations. Based on a common research framework from STEP, each chapter introduces key findings and challenges existing theory, offering answers to two broad questions in the Asia Pacific context: How do business families and family businesses generate and sustain entrepreneurial performance across generations and how does entrepreneurial performance relate to the continuity, growth and transgenerational entrepreneurship of business families and family businesses? In doing so, the authors look at key issues faced by family business including dealing with communication issues across generations, resolving conflict between siblings, preparing and luring younger generations back to family business, and professionalization of business. The chapters go beyond the succession and governance challenges and explore the processes and outcomes of entrepreneurship in the AustralAsian family context. Academics, teachers and students in business and management, entrepreneurship and family business, and Asian studies will find this path-breaking book of great value, as will libraries, policymakers and consultants.
