Type 2 diabetes is a common condition that causes the level of sugar (glucose) in the blood to become too high. It can cause symptoms like excessive thirst, needing to pee a lot and tiredness. It can also increase your risk of getting serious problems with your eyes, heart and nerves. It's a lifelong condition that can affect your everyday life. You may need to change your diet, take medicines and have regular check-ups.

Type 2 diabetes - NHS

When you have type 2 diabetes, your body still breaks down carbohydrate from your food and drink and turns it into glucose. The pancreas then responds to this by releasing insulin. But because this insulin can ' t work properly, your blood sugar levels keep rising. This means more insulin is released.

Type 2 diabetes | What it is and what causes it | Diabetes UK

Improve control of their blood glucose levels ; See what effect different foods and drinks have on glucose levels, thus allowing them to make informed diet and lifestyle choices ; Reduce HbA1c and the subsequent chances of developing diabetes-related complications, such as heart disease and stroke, retinopathy, neuropathy, and symptoms of depression.
